<60 mL/min/1.73 m2 defines CKD. Patients with eGFR values
>=60 mL/min/1.73 m2 may also have CKD if evidence of persistent
proteinuria is present. Additional information may be found at

HIV-2 Abs, EIA					01
HIV-2 Ab-O.D. Ratio	Negative			Neg:<1.00	01

Interpretation: A repeatedly reactive HIV-2 result may indicate
infection with HIV-2 virus. However, HIV1 positive patients (50-90%)
may also react in HIV-2 EIA. Reactive results should be investigated
by supplemental tests. Positive HIV-2 results should be considered
indicative of infection if HIV-1 has been ruled out with negative
HIV-1 testing, patient has epidemiological risk factors for HIV-2, and
supplemental tests such as HIV-2 Immunoblot (Investigational use only)
show the presence of HIV-2 specific viral bands.

Chlamydia/GC Amplification

Neisseria gonorrhoeae, NAA	Negative			Negative	01
Please note:					01

Acceptable specimens for this test are male urethral swab,
endocervical swab and liquid based pap specimens, vaginal swabs in
APTIMA transports and first void urine. See online Directory of

LabCorp now offers an enhanced accuracy testosterone test specifically designed for lower testosterone levels (test #070001; Testosterone, Total, Women, Children and Hypogonadal Males, LC/MS-MS). CDC and several academic societies recommend improved testosterone tests for women, children, and hypogonadal males and should be performed using test #070001.
